**TOPIC:** "THE DESIGN OF THE 1990 POST ENUMERATION-SURVEY"

The question of census undercount has recently gained considerable attention. The 1990 Post-Enumeration Survey (PES) constitute the major vehicle for measuring coverage by area on the 1990 Decennial Census. Its results may be used to adjust the Census enumeration. The background of the survey, the sampling plan, the methods used to measure the Census omissions and Census erroneous enumerations will be discussed. The treatment of nonresponse, the use of dual system estimation to estimate the total population by poststrata, and the use of these estimates to calculate adjusted census data will also be presented.
